## Anti-Spam & Anti-Virus Protection

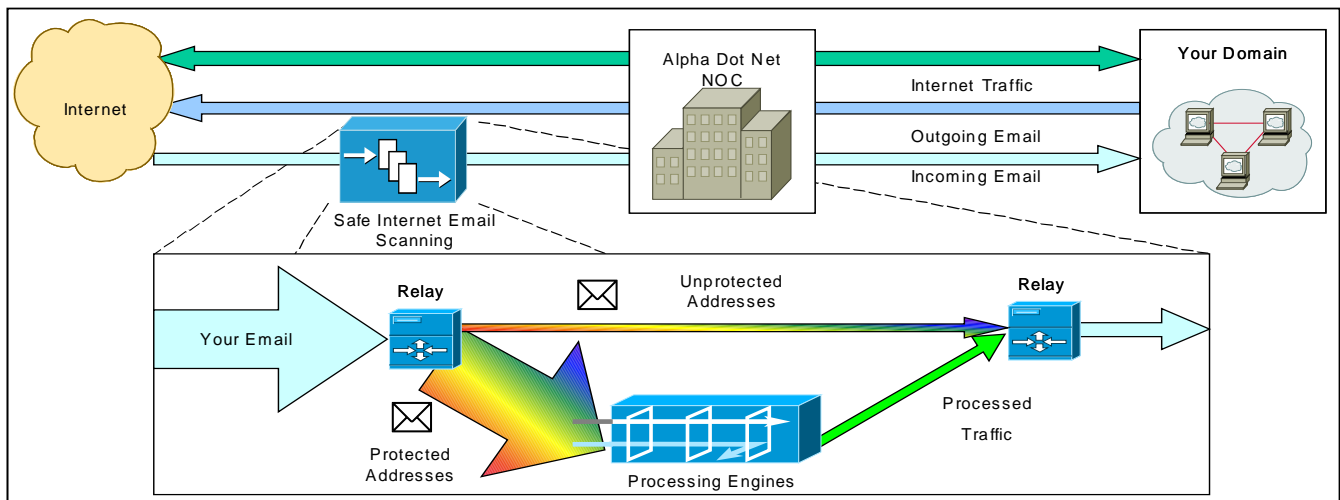

We at alpha dot net are continually striving to deliver the very best in Industrial strength communications technology to our customers. Due to the serious impact of viruses and spam on the everyday business of many of our customers, alpha dot net has developed an additional protection solution, providing cutting edge spam and virus protection service for business and home users today.

### KEY FEATURES

- Blocks above 95% of incoming Spam
- Today's leading Anti-Spam & Anti-Virus gateway defence technology
- Automatic, timely, secure updates
- New Spam filters available every 10 minutes
- Automated virus pattern updates ensuring instant protection against the latest borne viruses in circulation

### KEY ADVANTAGES

- No pre-purchase or downloading of software required
- No upfront investment in hardware
- Zero Administration and staff training
- Increased staff productivity
- Reduced Data costs due to less mail traffic to your network
- 24/7/365 protection from new spam and virus attacks
- Rapid deployment

### WHAT IS *safe internet*

*safe internet* is a world class Anti-Spam and Anti-Virus solution used to protect your email account from unwanted and dangerous deliveries. It has been designed to provide maximum protection at minimum costs for you. *safe internet* is comprised of two complementary components:

The service functions as an external layer around your existing network, with all filtering and processing being done before the data even reaches your servers. Your inbound mail is simply redirected through the *safe internet* before it's delivered to your Network.

#### Anti-Virus

- The first component is an Anti-Virus solution which protects your mail from Viruses, Worms and Trojans. All scanned emails are stamped with a MIME compliant message giving you peace of mind that your mail has been scanned.

#### Anti-Spam

- The second component is an Anti-Spam solution that blocks unwanted mail from entering your inbox saving you both time, costs and the everyday frustrations associated with unwanted junk mail.

The feature that makes *safe internet* so powerful is that the emails are scanned BEFORE they are delivered to you. This technique affords several benefits over existing methods, the most

significant of which being that no extra software or hardware must be purchased or installed, and since all required updates are applied externally and regularly, no additional maintenance or upgrade burdens are placed on your network administrator.

### BENEFITS FOR DOMAIN HOLDERS

*safe internet* provides a 'ready to launch' value added service for companies nationwide. It is a flexible 'turn on' solution, unlike in-house solutions, no upfront investment in hardware infrastructure or deployment of additional resources is required. Simply subscribe to the service and we take care of the rest.

Benefits of the *safe internet* service:

- **Rapid Deployment** - You can offer immediate protection to your network without any additional investment
- **Cost Savings** - You save time and money, because all the processing of viruses and spam is performed by us on our network. Done before the traffic enters your network, you save operational, bandwidth and email storage costs
- **Zero Administration** - Many anti-spam and anti-virus solutions place even more burden on administrators. Immediately effective out-of-the box and constantly updated, *safe internet* doesn't require any tuning or training of filters by administrators.

### PRICING

*safe internet* is offered at \$4.40/month per email address, which will simply appear as an additional item on your existing account invoice.

You can choose to have all your domain's email addresses covered automatically, or you can specify those which you want to be covered by the service. We offer discounts based on the number of email addresses protected. Please see reverse for details.

### HOW TO APPLY

To take advantage of *safe internet*, send an email to [safeinternet@alpha.net.au](mailto:safeinternet@alpha.net.au) with "please sign me up" in subject header, and the rest will be taken care of. If you would like more information about the service please contact us:

All prices are based on a one (1) year subscription. Special pricing is available for Education and Non-Profit organizations.

## alpha dot net CORPORATE SUMMARY

alpha dot net (ADN) is an Internet Service Provider (ISP) in Sydney, Australia. It was established in 1996 and is a privately owned company. ADN's core business is providing and supporting Internet applications and connectivity for larger enterprises.

ADN provides a range of products suitable for SME's and large enterprises. These include high availability data connections and best of breed online services. Many of these services are based on communications products sourced from Telstra Wholesale; others have been developed in house by ADN, or are a synthesis of Telstra Wholesale products and ADN additions. They include:

- ❖ Low latency, high availability, and high throughput data services, using Telstra Wholesale Ethernet (TWE), Telstra Wholesale Transmission (TWT) and Telstra wholesale Layer 1 (BizLink).
- ❖ Online backup services to provide data protection and offsite storage.
- ❖ Internet gateway servers.
- ❖ Web site hosting and domain name services.
- ❖ Email services.
- ❖ Business xDSL.
- ❖ Corporate dialup.
- ❖ Virtual Private Network (VPN) configuration and maintenance.
- ❖ Local Area Network (LAN) administration.
- ❖ Online collaboration and meetings.
- ❖ Email archiving.
- ❖ Voice Over Internet Protocol (VoIP) services.
- ❖ Consultancy.

ADN is not a web site or application development service nor a hardware company. However as a result of experience in the industry we can match clients to appropriate providers of these services.

Our experience has spanned servicing the following industry sectors:

- Financial Services
- Local Councils
- Media
- Legal & Accounting
- Logistics
- Automotive
- Insurance
- Education & Training
- Systems Integrators
- Advertising & Marketing
- Retail Distribution
- Public Sector Health
